

For Immediate Release

Continued Success for X-ray Irradiators in Japan

WHEELING, Illinois (March 28, 2008) – Faxitron X-Ray LLC (Faxitron) today announced that it has fulfilled a five system irradiator order through AcroBio, Faxitron’s local distributor in Tokyo, Japan. Four of the five systems are RX-650 x-ray irradiators. The units will be used for feeder cell irradiation. The compact size and moderate price of the RX-650 make it ideal for dedicated feeder cell work.

“We continue to see strong demand for x-ray irradiators,” notes Don Kissock, Vice President, International Sales. “The footprint, cost, and safety of x-ray systems make them a very attractive alternative to heavy, expensive, and high maintenance gamma (radioisotopic) irradiators.” Cesium irradiators have fallen under scrutiny as of late due to reports suggesting that the accessibility of the radioactive cesium poses a potential security risk.

About Faxitron X-Ray LLC

Faxitron X-Ray LLC is the global leader in cabinet x-ray systems for specimen radiography, research, and NDT applications. With an installed base of over 5,000 systems in medical facilities and scientific and industrial laboratories around the world, Faxitron is the industry standard in cabinet x-ray. For over 30 years, Faxitron has defined cabinet x-ray by developing innovative products to meet the evolving needs of our customers. From film to the latest in digital imaging technology, the company’s focus on quality and ease-of-use continues to earn the trust and repeat business of its customers.
